Project Description:

Our project is a volunteering website that aims to connect users with volunteering opportunities that work well with the user's schedule and values. Users can search for volunteering opportunities that align with their interests and hobbies, or filter by location and scheduling times if they need the opportunities to fit in their plan. The features of the website also allow users to interact with others to find community in shared volunteering events. The first storyboard depicts a scenario where a user aims to find a volunteering opportunity on our site based off her hobby, and the second storyboard depicts a scenario where a user aims to find a volunteering event on our site that's at a feasible distance due to barriers in how she's able to commute.

Storyboards
Sparkly Panda Cats

1) User likes volunteering but wants to find an opportunity related to a hobby of hers to make friends

3) User finds and contacts a cooking volunteering group that interests her

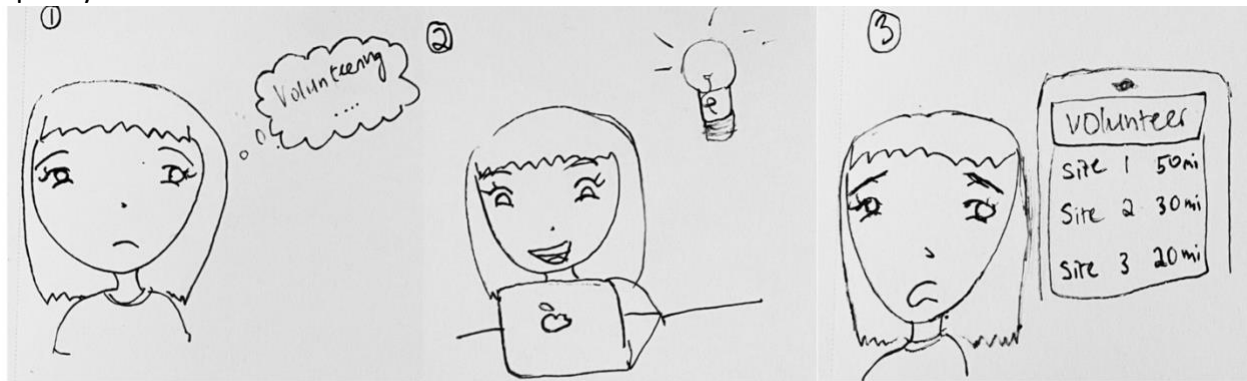

2) User uses our site to search up and narrow down volunteering opportunities related to cooking

4) User goes to the volunteering event and meets many people that have her shared interest, making her a happy volunteer!

Storyboards
Sparkly Panda Cats

1) User expresses desire to volunteer but is too tired to commute far

2) User decides to look up volunteering opportunities

3) User finds all the volunteering events are too far for her liking

4) User decides to use our site to narrow down nearby volunteering opportunities simply through her zip code

5) User finds an event at a good distance and books to volunteer using our site

6) User has a quick, stress-free commute to her volunteering activity booked through our site
